

Toolface Control

When you're sliding, Pason Toolface Control improves accuracy and maximizes ROP by automatically adjusting top drive position and auto driller setpoints to maintain the target toolface.

What Toolface Control does

How Toolface Control achieves this

Consistent build rates and smooth wellbores

Increased target accuracy

Maximizes sliding ROP

Optimized differential pressure while sliding

Reduces directional driller workload

Automatic Go-To-Bottom sequence and continual steering adjustments

Case Study

A comparison of two identical well profiles, one with Toolface Control and one without.
